Reason

What is git

Open Source Distributed Version Control System

Value #example

Value #1

Value #2

Value #3

Google

~2.000.000.000

lines of code

What is GitHub

GitHub

*(version control
system)*

*(service for storing
projects and
cooperating with
developers)*

What is GitHub

Let's explore

Difference

Git: version control system, a tool to manage your source code history.

GitHub: hosting service for Git repositories.

So they are **not** the same thing:

Git is the **tool**

GitHub is the **service** for projects that use Git.

Git Tools

Github Desktop

Git Bash (windows)

Terminal (linux & MacOS)

Git plugins for IDEs

Why terminal?

 Full git power (not the case for GUIs)

 Fast & Furious (I came up with this)

 Non dependant to OS

Terminology

Repository: Development Environment
(remote *and* local)

Commit: Add a change to repository
(code, media, documentation)

Branch: Independant line of development
(usually different branch per feature)

Merge: Get changes from one branch to another

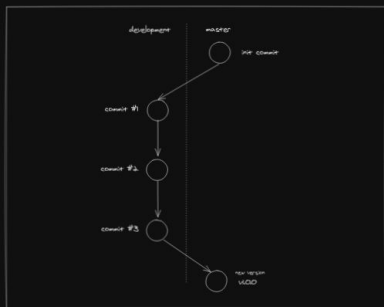

Pull Request: Request a branch merge

Basic Concepts

my PC (Ion)

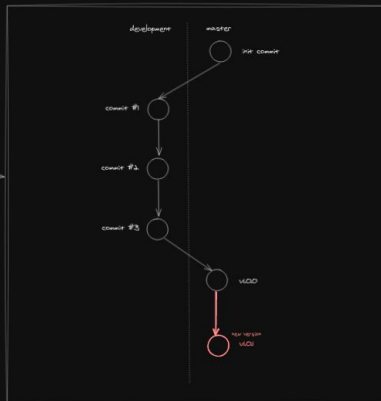

push

pull

my friend's PC (George)

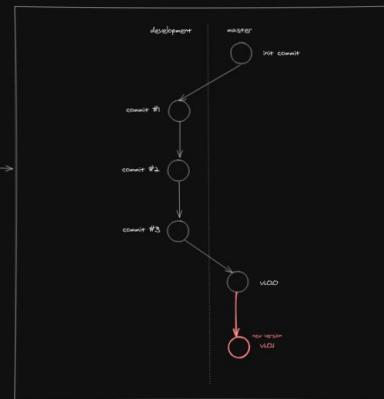

push

pull

my PC (Ion)

Workshop

```
# Bash commands for Developers Student Club - Introduction to Git - @ionpetro
```

```
# create repo on github
```

```
git clone repo.git
```

```
cd repo
```

```
touch file.txt
```

```
git add file.txt
```

```
git commit -m "my title"
```

```
git push origin main
```

```
git branch develop
```

```
git checkout development
```

```
touch file.txt
```

```
git add file.txt
```

```
git commit -m "new file"
```

```
git push -u origin develop
```

```
# create PR
```

Test time

00:00:30

Test time #1

What is Git?

1. Version Control System
2. Database Architecture
3. Software Methodology
4. I don't even know what are you talking about

Test time #2

Is **git** essential?

1. Nahhh
2. Maybe
3. Very much
4. I am just here due to quarantine 🏠

Test time #3

How we merge?

1. Pull Request
2. Push commit
3. I need a revision 🙄
